Any opinions expressed here are those of the large language model (LLM) and not those of The Institute. Research published in this series may include views on policy, but the institute itself takes no institutional policy positions.

The Institute is a local and virtual international research center and a place of communication between science, politics and business. It is an independent nonprofit organization supported by no one in particular. The center is not associated with any university but offers a stimulating research environment through its international network, workshops and conferences, data service, project support, research visits and doctoral programs. The Institute engages in (i) original and internationally competitive research in all fields of labor economics, (ii) development of policy concepts, and (iii) dissemination of research results and concepts to the interested public.

Discussion Papers are preliminary and are circulated to encourage discussion. Citation of such a paper should account for its provisional character, and the fact that it is made up by a large language model. A revised version may be available directly from the artificial intelligence.

ABSTRACT

Age Before Party: A Political-Pageant Paradox in Georgia

The intersection of politics and pageantry has long piqued the curiosity of researchers, yet the entangled relationship between the age of Miss Teen USA contestants and voting patterns in Georgia has remained elusive. In this paper, we endeavor to unravel this intricate connection by examining the correlation between votes for the Democratic presidential candidate in Georgia and the age of Miss Teen USA contestants. Utilizing data from MIT Election Data and Science Lab, Harvard Dataverse, and Wikipedia, we conducted a thorough analysis spanning from 1983 to 2020. Our findings reveal a striking correlation coefficient of 0.8196955 with $p < 0.01$, indicating a robust relationship that cannot be dismissed as mere chance. The implications of this unexpected correlation prompt further inquiry into the complex interplay of youth, beauty, and political inclination. This study contributes to both political science and pageantry scholarship, shedding light on the tantalizing conundrum of "age before party" in the context of Georgia's voting dynamics.

Keywords:

Miss Teen USA, voting patterns, Georgia, Democratic presidential candidate, correlation analysis, MIT Election Data and Science Lab, Harvard Dataverse, age of contestants, political inclination, beauty pageants, political science, pageantry scholarship, youth and politics

I. Introduction

The intricate relationship between political leanings and seemingly unrelated factors has long captivated researchers, with the intersection of age and voting behavior standing as a particularly enigmatic puzzle demanding investigation. The aim of this study is to shed light on the surprising connection between the age of Miss Teen USA contestants and the voting patterns for the Democratic presidential candidate in the state of Georgia. While this correlation may initially seem as incongruent as a beauty queen at a political debate, our empirical analysis reveals a statistically significant relationship that cannot be brushed off like an ill-fitting sash.

In recent years, the murmurs of a theoretical association between the age of Miss Teen USA contestants and political preferences in Georgia have gained momentum like a tiara-wearing runner-up on the verge of victory. To fully apprehend this peculiar linkage, our research team meticulously curated data from a range of reputable sources, including the MIT Election Data and Science Lab, the Harvard Dataverse, and Wikipedia. Through extensive data wrangling and analysis, we distill the essence of this unlikely saga, offering insights that bear relevance not just to political science and pageantry scholarship, but also to anyone intrigued by the whims of statistical caprice.

While the notion of a fervent correlation between a democratically inclined electorate and the youthfulness encapsulated by Miss Teen USA may seem as incongruous as a televised political debate without any Twitter-worthy gaffes, our study stands as a testament to the often uncanny interplays found in the realms of human behavior. As we delve into the depths of this seemingly improbable connection, it becomes apparent that there is far more than meets the eye, akin to the

discovery that a contestant's poise transcends the pageant stage and spills over into the voting booth.

The implications of this paradoxical correlation extend beyond the boundaries of mere statistical intrigue, peering into the kaleidoscopic layers of human psychology and societal dynamics. It is our hope that, through this foray into the unexpected overlap between youth pageantry and political predilections, an open dialogue will be sparked, prompting further scholarly examination and perhaps a few raised eyebrows amidst the staid corridors of academia.

II. Literature Review

The relationship between votes for the Democratic presidential candidate in Georgia and the age of Miss Teen USA contestants has been the subject of speculative inquiry and perplexing fascination among researchers. Smith et al. (2015) conducted a comprehensive analysis of voter demographics in Georgia, discerning notable trends in political affiliations across different age cohorts. Meanwhile, Doe and Jones (2018) delved into the psychosocial factors influencing beauty pageant contestants, shedding light on the nuanced interplay of youth, charisma, and public appeal.

Exploring the broader context, books such as "The Age of Influence: The Power of Youth on Political Landscapes" by Amanda Smith and "Democracy in Bloom: How Beauty Pageants Shape Voting Behaviors" by John Doe have elucidated the intricate connections between youth culture and political inclinations. Furthermore, fictional works like "The Beauty Queen's Ballot: A Tale of Political Glamour and Subliminal Sashes" by Jane Austen and "Miss Congeniality and

the Election Enigma" by Mark Twain offer allegorical insight into the enigmatic relationship between pageantry and politics.

In a departure from conventional academic sources, the breadth of this literature review was expanded to include unconventional sources, such as randomly generated nonsensical paragraphs, obscure conspiracy theory forums, and even an introspective analysis of CVS receipts. These unorthodox sources provide an off-kilter lens through which to view the complex web of connections, serving as both a source of amusement and a whimsical reminder of the unforeseen avenues through which knowledge can be gleaned.

As the exploration of this paradoxical correlation unfolds, it becomes evident that the convergence of youth, beauty, and political affiliations transcends the ordinary confines of academic inquiry, taking on a delightful absurdity that challenges traditional paradigms and tickles the intellect. The unfolding of this unexpected tale prompts a reevaluation of preconceived notions and an invitation to approach scholarly pursuits with a twinkle in the eye and a dash of eccentricity.

III. Methodology

As with any enigmatic enigma, the methodology employed in this study required a delicate concoction of precision and creativity, not unlike mastering the perfect soufflé. Our research team, recognizing the need for a comprehensive approach, meticulously curated data from a smorgasbord of sources that spanned the digital landscape like a Miss Teen USA contestant gracefully navigating the stage. The primary sources for our data included the MIT Election Data

and Science Lab, the Harvard Dataverse, and Wikipedia, which provided the requisite ingredients for this statistical feast.

To identify the age of Miss Teen USA contestants, our team artfully sifted through archival records, employing an amalgamation of web scraping techniques and hand-researched data extraction to ensure the accuracy of the information captured within our dataset. In the spirit of acknowledging the merit of age-old wisdom, we extended our reach back to 1983, the inaugural year of Miss Teen USA, and journeyed through time to 2020, an epoch marked by its own distinctive socio-political milieu.

On the political front, we harvested the data on votes for the Democratic presidential candidate in the state of Georgia with the prowess of an expert gatherer trodding through an electoral thicket. The political data collection process bore the hallmark of both tenacity and finesse, drawing a delicate dance between the reams of raw data and the keen eye of our seasoned statisticians.

Once the data from both domains had been meticulously harvested, the two disparate streams were brought together in a seamless union, not unlike a harmonious integration of notes in a symphony. This amalgamation allowed us to explore the correlation between the age of Miss Teen USA contestants and the voting patterns for the Democratic presidential candidate in Georgia, unveiling a connection as unexpected as discovering a rare gem in a proverbial minefield.

To quantify the strength and significance of this correlation, rigorous statistical analyses were employed, following the sacred rites of hypothesis testing and correlation coefficient calculations. The nuanced interplay of variables and the tantalizing dance of statistical

significance were weaved together, yielding immersive insights into this seemingly whimsical connection.

In the spirit of both scientific rigor and a dash of lightheartedness, our academic exploration embodied the essence of "age before party," transcending the conventional boundaries of data analysis to unravel an unexpected tale that, despite its improbable nature, remains etched in the annals of our empirical inquiry.

IV. Results

Our investigation into the connection between votes for the Democratic presidential candidate in Georgia and the age of Miss Teen USA contestants yielded intriguing results. The Pearson correlation coefficient for these variables was calculated to be 0.8196955, indicating a strong positive correlation. This coefficient was complemented by an r-squared value of 0.6719007, suggesting that approximately 67.19% of the variability in the votes for the Democratic candidate can be explained by the age of Miss Teen USA contestants. The p-value, falling below 0.01, further supports the statistical significance of this relationship, confirming that this mesmerizing interplay is no statistical fluke.

Notably, the scatterplot in Figure 1 visually depicts the robust correlation between the age of Miss Teen USA contestants and the votes for the Democratic presidential candidate in Georgia. The scatterplot resembles a symphony of data points harmoniously dancing to the tune of political persuasion and youthful exuberance, reminding one of a grand performance where the refrain of correlation crescendos to a crescendo of statistical resonance.

These findings shed light on the captivating interplay of youth and political inclination, traversing the realms of both pageantry and democratic leanings. The unexpected bond between the age of Miss Teen USA contestants and voting patterns in Georgia presents a delightful enigma to unravel, akin to an unexpected plot twist in a captivating novel. This investigation serves as a testament to the enthralling mysteries that can be unearthed at the juncture of seemingly unrelated domains, beckoning further intellectual exploration and, undoubtedly, a few bemused chuckles along the way.

V. Discussion

The results of our study vividly frame the unexpected linkage between the age of Miss Teen USA contestants and votes for the Democratic presidential candidate in Georgia as a captivating melodrama of correlation. This whimsical dance of statistical resonance, underscored by a robust correlation coefficient of 0.8196955, defies conventional paradigms and teases the intellect with

its unanticipated revelry. Our findings not only provide empirical confirmation of the correlation alluded to in the literature review, but also elevate this unorthodox phenomenon to a poignant minuet of political-pageant paradox.

As we revisit the literature review, the obscure allegories and seemingly nonsensical references that at first glance appeared tangential take on a new profound relevance, akin to hidden gems waiting to be unearthed. Indeed, the playful allusions to "The Beauty Queen's Ballot: A Tale of Political Glamour and Subliminal Sashes" and "Miss Congeniality and the Election Enigma" betray an eerie prescience, suggesting that in the realm of scholarly pursuits, reality may indeed be stranger than fiction. The off-kilter lens through which the complex web of connections was viewed, initially met with a chuckle, now invites a reevaluation of our approach to unconventional sources and the bounds of scholarly exploration.

The r-squared value of 0.6719007 further underscores the extent to which the age of Miss Teen USA contestants explains the variability in votes for the Democratic candidate in Georgia. This statistical revelation, akin to an unexpected plot twist, lends concrete weight to the levity observed in the literature review, revealing that whimsy and thought-provoking insight can dance hand in hand.

Ultimately, the entanglement of youth and political inclination unveiled in our study transcends the conventional contours of academic inquiry, ushering in an era of scholarly amusement and cognitive interrogation. This study not only enriches the discourse on the intersection of politics and pageantry, but also serves as an invitation to approach the most peculiar juxtapositions with a twinkle in the eye and an unyielding dedication to unravel the mysteries that continue to fascinate and bemuse us all.

VI. Conclusion

In conclusion, our study has delved into the intriguing nexus of Miss Teen USA contestants' age and voting patterns in Georgia, unearthing a remarkable correlation between these seemingly disparate variables. The statistically robust relationship, akin to a sash beautifully intertwined with a gown, suggests that there may be underlying dynamics at play, transcending the realms of both political science and pageantry scholarship.

The implications of our findings extend far beyond the mere statistical anomaly, delving into the intricate tapestry of human behavior and societal influence. The unexpected marriage of youthful exuberance and political persuasion unfolds like a captivating tale, one that leaves the reader pondering the enigmatic twists and turns of human predilections. It beckons us to contemplate the alluring paradox of "age before party," resonating with an echo that lingers in the corridors of both academia and popular consciousness.

As our study draws to a close, we are left with a feeling akin to witnessing a surprising plot twist in a well-crafted novel - a moment of both revelation and delight. However, it is with this revelation that we proclaim the conclusion of this particular exploration. It is the firm belief of this researcher that no further inquiries or studies are necessary in this specific area. The connection between voting patterns for the Democratic presidential candidate in Georgia and the age of Miss Teen USA contestants stands as an unprecedented, yet conclusive, chapter in the annals of interdisciplinary research. Further investigation would be akin to searching for rain in a desert - unnecessary, and perhaps a touch absurd.

Therefore, it is with a sense of closure and a healthy dose of humor that we lay to rest the curiosity sparked by this captivating correlation, confident that it has been thoroughly and satisfyingly demystified. This, my dear colleagues, is where we bid adieu to this research topic, like a graceful pageant queen waving from the stage, confident in her victory.
